PARK AND RECREATION COMMITTEE – REGULAR AGENDA

TO: PARKS AND RECREATION COMMITTEE
FROM: SALLY BENTZ-DALTON – PARK MANAGER
DATE: FEBRUARY 5, 2020
SUBJECT: INPUT FOR NEW LIGHTING IN PARK UPDATE

DISCUSSION

Review and discuss new lighting options to replace 10 existing light poles in Holbrook-Palmer Park. Staff has provided a few more examples of the lighting designs with photos below. Included are attachments for the options below for 4, 5 and 6 from the manufacture.

BACKGROUND

As part of the Holbrook-Palmer Park Improvements Program to implement several proposed projects as recommended by the park & Recreation Committee and approved by City Council. The replacement of 10 poles and fixtures using mostly existing controls, conduit and wiring already existing is a project was proposed in the 5-year outlook.

The Town wishes to move ahead with LED lights. Town staff have considered the current WIFI, cameras and outlets currently on a few of the poles. Staff is looking for input for the design of the fixtures.

Atlas Lighting Products Eagle Series

2nd Generation LED Site Lighter

SPECIFICATIONS:

Construction:
Designed for commercial and industrial applications, providing cooler operating temperatures, brighter light and longer LED life. The die cast aluminum housing utilizes external airflow fins allow for greater heat dissipation. The easy access driver compartment is a thermally independent compartment, separate from LED generated heat, for cooler operation and longer driver life.

Optics:
Atlas Site Lighter Pro fixtures utilize precision engineered individual lenses for maximum light intensity. The lens is made of optical grade polycarbonate. Advanced one piece optic board engineered for maximum light intensity. Types II, III, V and Forward Throw distributions are available. Types II, III and Forward Throw optics are rotatable allowing for optimal placement of the fixtures on the perimeter of any layout.

Mounting:
The easy mount bracket makes installation to any style pole quick and easy. Tenon and other mounting accessories also available.

Thermal Management:
Atlas Site Lighter Pro fixtures are designed as a complete system to optimize LED life and light output. The thermal stacking heat removal technology extracts heat from within the housing moving it away from LEDs and components. The lower temperatures result in long LED life (200,000+ hrs) and component life and also allows for higher light output.

Specification-Grade Optics

ALED150

RAB engineered "specification-grade" optics for the ALED150 that deliver efficient, clean, uniform light distributions at a reasonable cost. The vacuum-metallized specular reflector creates what is known as "repeatable" optics manufacturing, ensuring consistent, reliable distribution. The optics are factory installed and meet IES Lateral Distribution Types II, III and IV.

For assistance in choosing the distribution to match your application, please contact RAB's Lighting Design department by emailing lightingdesign@rabweb.com or calling 888 722-1000.

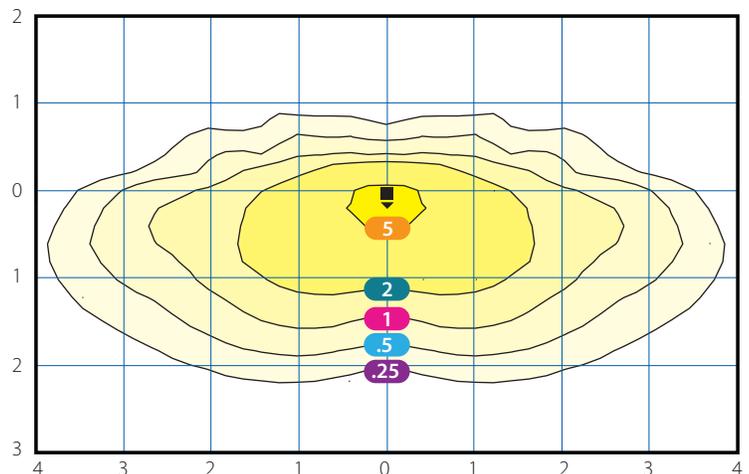

Please visit rabweb.com to see which products are DLC listed.

Type II

The Type II distribution is ideal for wide walkways, on ramps and entrance roadways, bike paths and other long and narrow lighting applications. Meant for lighting larger areas and usually located near the roadside, this type of lighting is commonly found on smaller side streets or jogging paths.

ALED2T150 Mounted at 25 ft.

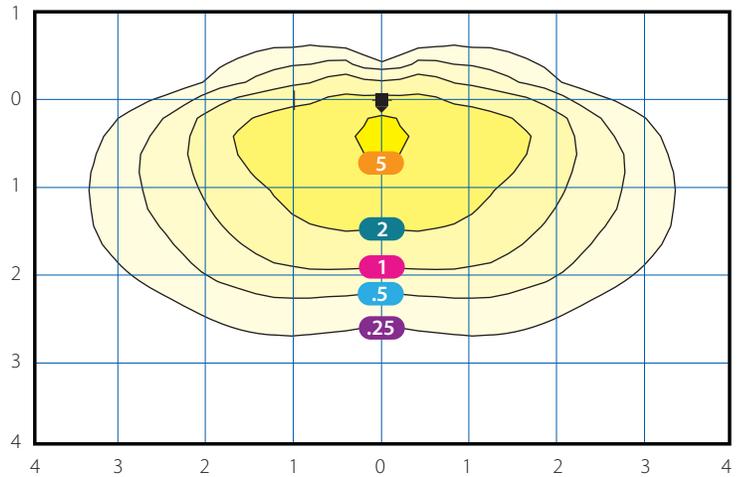

Grid Scale: Multiples of Mounting Height • Values shown in Footcandles
Photometric Report #RAB02266MOD15050

Type III

The Type III distribution is ideal for roadway, general parking, and other area lighting applications where a larger pool of lighting is required. It is intended to be located near the side of the area, allowing the light to project outward and fill the area.

ALED3T150 Mounted at 25 ft.

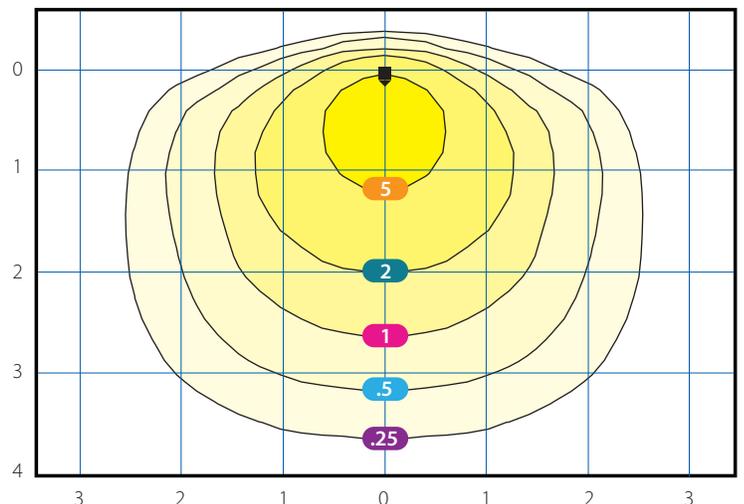

Grid Scale: Multiples of Mounting Height • Values shown in Footcandles
Photometric Report #RAB02130

Type IV

The Type IV distribution (also known as a "Forward Throw") is especially suited for mounting on the sides of buildings and walls, and for illuminating the perimeter of parking areas. It produces a semicircular distribution with essentially the same candlepower at lateral angles from 90 to 270 degrees.
